Linking NFCs more easily
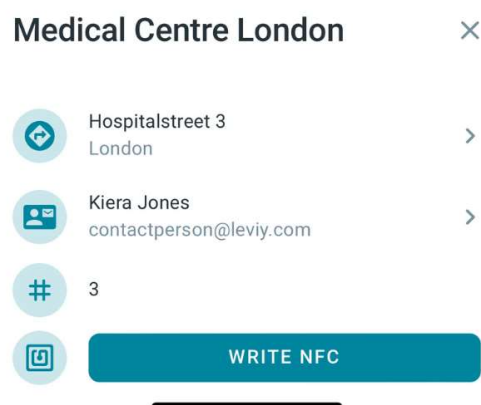

Until now, linking NFCs tags required a separate app. This created some challenges.
For this reason, we made the **write functionality part** of the **regular app**. The functionality is only available to users with the user type administrator. Go to the **information overview of an object and unit to link an NFC**

Employee selection updated

In this release, we have improved an existing functionality. This concerns the employee selection in a DKS and Checklist control. This is now a **lot faster** and more **intuitive** to use.

Periodic tasks in the same flow

In addition to regular work, it is now also possible to **register periodic tasks**. Prioritised periodic tasks are **displayed** in the **work schedule overview** per unit so that the **cleaner can take them with the regular work**. In this article, you can read when a periodic task is prioritised.

Work schedule display improved
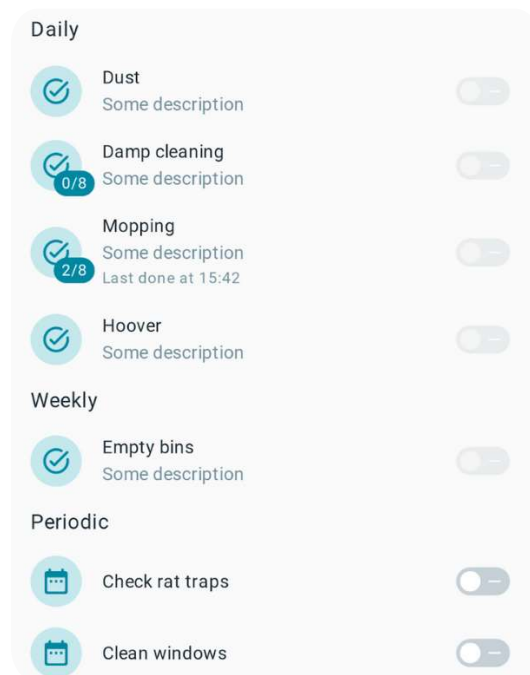

With the addition of the relevant periodic tasks to the overview for the cleaner, we have chosen to make the **display** of the **work programme per unit larger**. This ensures it presents all information in the best possible way for the employees and prevents scrolling.

Overview of periodic tasks per object
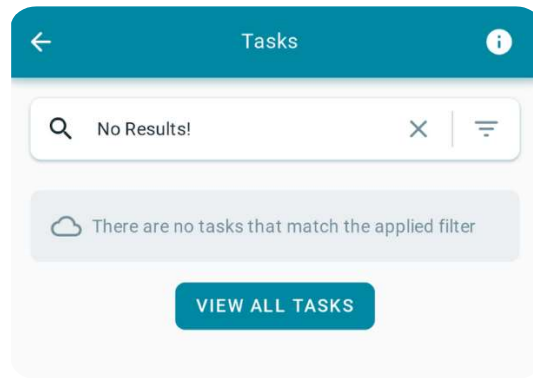

Once all **regular tasks have been completed, the status changes to done** and the **unit disappears from the list**. From the object overview in the app, there is a total **overview** of all units where **periodic tasks** with priority are open. This is to avoid losing sight of the periodic tasks included in the regular cleaning.

Quickly disable filters

The Tasks overview in the app allows searching and filtering. The **display when there are no results** because nothing has been assigned or, for example, all tasks have already been completed, **has been clarified**. Filters and searches can also be removed with a single click.
